**The Univac Corporation** Jul 30 2020 Univac Corporation (now Unisys) has been an innovator in computer systems since the early 1960s. Univac (then Remington Rand), built the first commercial computer, the Univac I. This volume continues the story of Univac (later Unisys) computer systems from the Univac 1105. Its successors—the early Univac 1100 machines—helped to establish the concept of a family of computer systems. It was one of the first to develop and deploy a multidimensional operating system that supported interactive, real-time, and batch processing. Ease of access and operation in all modes was especially attractive to scientific and academic communities. It was instrumental in developing COBOL and DMS-1100 for business data processing. The upward compatibility of the Univac 1100 series machines from the Univac 1107 to the Sperry 2200 series demonstrated how evolutionary development could protect its customer's investment while continually enhancing performance. As one of the founders of the computing industry, Univac has survived over 60 years of expansion and consolidation to survive as part of Unisys as one of the two remaining mainframe manufacturers.

**Tilapia lake virus disease strategy manual** Jun 21 2022 The purpose of this manual is to inform national policymakers and other stakeholders of issues related to the development of contingency plans for responding to outbreaks of tilapia lake virus disease (TiLVD), which has caused substantial mortalities, up to 90 percent, in populations of both wild and farmed tilapia in Asia, the Americas, and Africa. The causative agent for this disease is tilapia lake virus (TiLV), which infects the liver, spleen, kidney, heart, gill tissues, brain, connective tissues of muscle, and reproductive organs of tilapia. Outbreaks of TiLVD not only have devastating economic effects on producers, but also can result in a variety of socio-economic impacts on surrounding communities. It would, therefore, be prudent to implement strategies for the prevention of TiLVD and to develop contingency plans to eradicate, contain, and mitigate the impacts of the disease when outbreaks occur. This manual provides information on: 1) the nature of TiLVD; 2) diagnosis; 3) prevention and control; 4) epidemiology; 5) principles of eradication, containment and mitigation; and 6) policy development issues.
