ACNS2009, the 7th International Conference on Applied Cryptography and Network Security, was held in Paris-Rocquencourt, France, June 2-5, 2009. ACNS '2009 was organized by the Ecole Normale Supérieure (ENS), the French International Center for Scientific Research (CNRS), and the French National Institute for

Research in Computer Science and Control (INRIA), in cooperation with the International Association for Cryptologic Research (IACR). The General Chairs of the conference were Pierre-Alain Fouque and Damien Vergnaud. The conference received 150 submissions and each submission was assigned to at least three committee members. Submissions co-authored by members of the Program Committee were assigned to at least four committee members. Due to the large number of high-quality submissions, the review process was challenging and we are deeply grateful to the

committee members and the external reviewers for their outstanding work. After meticulous deliberation, the Program Committee, which was chaired by Michel Abdalla and David Pointcheval, selected 32 submissions for presentation in the academic track and these are the articles that are included in this volume. Additionally, a few other submissions were selected for presentation in the non-archival industrial track. The best student paper was awarded to Ayman Jarrous for his paper "Secure Hamming Distance Based Computation and Its Applications," co-authored with Benny Pinkas. The review process was run using the

iChair software, written by Thomas Baigneres and Matthieu Finiasz from EPFL, LASEC, Switzerland and we are indebted to them for letting us use their software. The program also included four invited talks in addition to the academic and industrial tracks.

The TDD workflow future-proofs apps so that they can be modified without fear of breaking existing functionality. Another benefit of TDD is that it helps software development

teams communicate their intentions more clearly, by way of test specifications. This book teaches you how to apply TDD when building React apps. You'll create a sample app using the same React libraries and tools that professional React developers use, such as Jest, React Router, Redux, Relay (GraphQL), Cucumber, and Puppeteer. The TDD workflow is supported by various testing techniques and patterns, which are useful even if you're not following the TDD process. This book covers these techniques by walking you through the creation of a component test framework. You'll learn automated testing theory which will help you work with any of the test libraries that are in standard usage today, such as React Testing Library. This second edition has been revised with a stronger focus on concise code examples and has been fully updated for React 18. By the end of this TDD book, you'll be able to use React, Redux, and GraphQL to develop robust web apps. What you will learn Build test-driven applications using React 18 and Jest Understand techniques and patterns for writing great automated tests Use test doubles and mocks effectively Test-drive browser APIs, including the Fetch API and the WebSocket API Integrate with libraries such as React Router, Redux, and Relay (GraphQL) Use Cucumber.js and Puppeteer to build Behaviour- Driven Development (BDD) style tests for your applications Build and test async Redux code using redux-saga and expect-redux Who this book is for This book is for frontend developers
