Didaktische Entwurfsmuster Jul 22 2022 Unterricht und seine Gestaltung stehen in einem Spannungsverhältnis zwischen Theorie und Praxis. Wie kann diese Kluft zwischen Wissen und Handeln überbrückt werden? Als eine Möglichkeit werden in jüngster Zeit didaktische Entwurfsmuster diskutiert. Auf systematische Weise dokumentieren sie bewährte Lösungen für wiederkehrende Probleme bei der Gestaltung didaktischer Szenarien und machen so das implizite Wissen erfahrener Lehrender für Novizinnen und Novizen nutzbar. Von wem, wie und warum wurde der Muster-Ansatz aus der Architektur auf die Didaktik übertragen? Welche Problematik verbirgt sich in diesem gedanklichen Brückenschlag? Wie sehen didaktische Entwurfsmuster aus und worin bestehen ihre Stärken und Schwächen? Was sind die notwendigen Voraussetzungen dafür, dass didaktische Entwurfsmuster nutzbringend für die Unterrichtsgestaltung eingesetzt werden können? Diesen Fragen nähert sich Reinhard Bauer aus einer diskursanalytischen Perspektive mit dem Ziel, den von Christopher Alexander für die Architektur entwickelten Muster-Ansatz für die Didaktik zu öffnen und nutzbar zu machen. Reinhard Bauer promovierte 2014 an der Alpen-Adria-Universität Klagenfurt. Er lehrt und forscht am Institut für übergreifende Bildungsschwerpunkte (IBS) der Pädagogischen Hochschule Wien, wo er sich im Zentrum für Lerntechnologie und Innovation (ZLI) mit den Einsatzmöglichkeiten von digitalen Technologien, Medien und Werkzeugen für eine zeitgemäße und innovative (Hochschul-)Didaktik beschäftigt.

Cathodoluminescence Microscopy of Inorganic Solids Sep 24 2022 Microcharacterization of materials is a rapidly advancing field. Among the many electron and ion probe techniques, the cathodoluminescence mode of an electron probe instrument has reached a certain maturity, which is reflected by an increasing number of publications in this field. The rapid rate of progress in applications of cathodoluminescence techniques in characterizing inorganic solids has been especially noticeable in recent years. The main purpose of the book is to outline the applications of cathodoluminescence techniques in the assessment of optical and electronic properties of inorganic solids, such as semiconductors, phosphors, ceramics, and minerals. The assessment provides, for example, information on impurity levels derived from cathodoluminescence spectroscopy, analysis of dopant concentrations at a level that, in some cases, is several orders of magnitude lower than that attainable by x-ray microanalysis, the mapping of defects, and the determination of carrier lifetimes and the charge carrier capture cross sections of impurities. In order to make the book self-contained, some basic concepts of solid-state physics, as well as various cathodoluminescence techniques and the processes leading to luminescence phenomena in inorganic solids, are also described. We hope that this book will be useful to both scientists and graduate students interested in microcharacterization of inorganic solids. This book, however, was not intended as a definitive account of cathodoluminescence analysis of inorganic solids. In considering the results presented here, readers should remember that many materials have properties that vary widely as a function of preparation conditions.

Trichoscopy Apr 07 2021 Trichoscopy is the dermoscopic imaging of the scalp and hair. The method is based on dermoscopy and videodermoscopy and is used for the evaluation and diagnosis of hair and scalp diseases. This book is a step by step guide to trichoscopy for practising dermatologists. Beginning with an overview of devices and tools, and trichoscopic terminologies, the following sections cover the diagnostic imaging of many different hair and scalp disorders, including alopecia, hair weathering, infection and infestation, psoriasis, and more. Complete sections are dedicated to systemic diseases and paediatric hair disorders. The book concludes with algorithms to help diagnose different disorders, and discussion on monitoring and follow up. The practical text is further enhanced with nearly 600 images to assist learning and self assessment. Key points Step by step guide to trichoscopic imaging for diagnosis of hair and scalp disorders Covers numerous disorders and includes section on paediatric trichoscopy Features algorithms to assist diagnosis Highly illustrated with nearly 600 clinical images

Spatial Synthesis Jan 04 2021 This book describes how powerful computing technology, emerging big and open data sources, and theoretical perspectives on spatial synthesis have revolutionized the way in which we investigate social sciences and humanities. It summarizes the principles and applications of human-centered computing and spatial social science and humanities research, thereby providing fundamental information that will help shape future research. The book illustrates how big spatiotemporal socioeconomic data facilitate the modelling of individuals' economic behavior in space and time and how the outcomes of such models can reveal information about economic trends across spatial scales. It describes how spatial social science and humanities research has shifted from a data-scarce to a data-rich environment. The chapters also describe how a powerful analytical framework for identifying space-time research gaps and frontiers is fundamental to comparative study of spatiotemporal phenomena, and how research topics have evolved from structure and function to dynamic and predictive. As such this book provides an interesting read for researchers, students and all those interested in computational and spatial social sciences and humanities.

Billboard Jul 30 2020 In its 114th year, Billboard remains the world's premier weekly music publication and a diverse digital, events, brand, content and data licensing platform. Billboard publishes the most trusted charts and offers unrivaled reporting about the latest music, video, gaming, media, digital and mobile entertainment issues and trends.

Alopecia Oct 13 2021 Being the editor of the book Alopecia, I feel delighted to work with the world-leading publisher IntechOpen Publisher. The current book has chapters emphasizing a variety of alopecias. The administration of newer drugs may treat hair loss by a variety of mechanisms. All the clinical variants of alopecias are discussed in detail. The book will help dermatologists, students, hair transplant surgeons, and physicians related to hair loss problems, giving them the opportunity to understand basic pathophysiological, clinical, and medical management options. The basic idea of the book is to diagnose alopecia correctly.

Dynamics and Mission Design Near Libration Points Apr 19 2022 In this book the problem of station keeping is studied for orbits near libration points in the solar system. The main focus is on orbits near halo ones in the (Earth+Moon)-Sun system. Taking as starting point the restricted three-body problem, the motion in the full solar system is considered as a perturbation of this simplified model. All the study is done with enough generality to allow easy application to other primary-secondary systems as a simple extension of the analytical and numerical computations.

Dictionary of the Printing and Allied Industries Nov 14 2021 The first edition of this dictionary, compiled by F.J.M. Wijnokus and published in 1967, was the result of years of systematic collection and preparation of thousands of terms and expressions which were until then not to be found in any other dictionary. The material was correlated for use in his daily work and, as the reputation of his private collection spread, there was an increasing demand for access to these findings. Until 1967 there was no comprehensive multilingual dictionary on the subject; former publications were incomplete and out of date and lacked clear definition - often leading to disastrous misunderstandings. Furthermore, the subject of printing, paper and ink technology had never been dealt with, in dictionary form, in relation to other aspects of the graphic industry. This new work, prepared by F.J.M. Wijnokus and his son, has been considerably up-dated. Much time has been devoted to checking the material against the most reliable and authoritative sources. The usefulness of the work has been further enhanced by the addition of Spanish and Italian to the original languages of English, French and German. The first edition was received with much enthusiastic praise and this new dictionary will undoubtedly continue to be an invaluable tool for all those working with the printed word in the widest sense. It is a reference work which should be in the hands of all those in any way connected with the printing industry, paper manufacturers, ink manufacturers, printers, bookbinders, publishers, lithographers, lay-out men and graphical research institutes.

Dermatoscopy in Clinical Practice Feb 17 2022 Dermoscopy has increasingly been taken up in general dermatology practice in the USA as a non-invasive technique for the differential diagnosis of pigmented skin lesions. Videodermoscopy - dermoscopy using a digital system - allows a higher-magnified observation of the skin surface and has also been used for other investigations, such as monitoring

Capture and Relaxation in Self-Assembled Semiconductor Quantum Dots Jul 10 2021 This is an overview of different models and mechanisms developed to describe the capture and relaxation of carriers in quantum-dot systems. Despite their undisputed importance, the mechanisms leading to population and energy exchanges between a quantum dot and its environment are not yet fully understood. The authors develop a first-order approach to such effects, using elementary quantum mechanics and an introduction to the physics of semiconductors. The book results from a series of lectures given by the authors at the Master's level.

Human-Computer Interaction -- INTERACT 2011 Jun 21 2022 The four-volume set LNCS 6946-6949 constitutes the refereed proceedings of the 13th IFIP TC13 International Conference on Human-Computer Interaction, INTERACT 2011, held in Lisbon, Portugal, in September 2011. The fourth volume includes 27 regular papers organized in topical sections on usable privacy and security, user experience, user modelling, visualization, and Web interaction, 5 demo papers, 17 doctoral consortium papers, 4 industrial papers, 54 interactive posters, 5 organization overviews, 2 panels, 3 contributions on special interest groups, 11 tutorials, and 16 workshop papers.

The Role of Halo Substructure in Gamma-Ray Dark Matter Searches Jun 28 2020 An important, open research topic today is to understand the relevance that dark matter halo substructure may have for dark matter searches. In the standard cosmological model, halo substructure or subhalos are predicted to be largely abundant inside larger halos, for example, galaxies such as ours, and are thought to form first and later merge to form larger structures. Dwarf satellite galaxies—the most massive exponents of halo substructure in our own galaxy—are already known to be excellent targets for dark matter searches, and indeed, they are constantly scrutinized by current gamma-ray experiments in the search for dark matter signals. Lighter subhalos not massive enough to have a visible counterpart of stars and gas may be good targets as well, given their typical abundances and distances. In addition, the clumpy distribution of subhalos residing in larger halos may boost the dark matter signals considerably. In an era in which gamma-ray experiments possess, for the first time, the exciting potential to put to test the preferred dark matter particle theories, a profound knowledge of dark matter astrophysical targets and scenarios is mandatory should we aim for accurate predictions of dark matter-induced fluxes for investing significant telescope observing time on selected targets and for deriving robust conclusions from our dark matter search efforts. In this regard, a precise characterization of the statistical and structural properties of subhalos becomes critical. In this Special Issue, we aim to summarize where we stand today on our knowledge of the different aspects of the dark matter halo substructure; to identify what are the remaining big questions, and how we could address these; and, by doing so, to find new avenues for research.

Dynamics And Mission Design Near Libration Points - Vol I: Fundamentals: The Case Of Collinear Libration Points Mar 18 2022 In this book the problem of station keeping is studied for orbits near libration points in the solar system. The main focus is on orbits near halo ones in the (Earth+Moon)-Sun system. Taking as starting point the restricted three-body problem, the motion in the full solar system is considered as a perturbation of this simplified model. New Horizons from Multi-Wavelength Sky Surveys Dec 03 2020 Large area sky surveys are now a reality in the radio, IR, optical and X-ray passbands. In the next few years, new surveys using optical, UV and IR mosaic cameras with high throughput digital detectors will expand the dynamic range and

accuracy of photometry and astrometry of objects over a significant fraction of the entire sky. Parallel X-ray and radio surveys over the same areas will produce astronomical image and spectroscopic databases of unprecedented size and quality. The combined data sets will provide significant new constraints on star formation, stellar dynamics, Galactic structure, the evolution of galaxies and large scale structure, as well as new opportunities to identify rare objects in the solar system and the Galaxy. Large area surveys have formidable data acquisition, processing, archiving, and data distribution demands and this meeting provided a forum for sharing experiences amongst workers specializing in different wavebands as well as discussing how multiband observations can reveal fundamental relationships in our understanding of the Universe.

Electron Transport in Quantum Dots Apr 26 2020 When I was contacted by Kluwer Academic Publishers in the Fall of 200 I, inviting me to edit a volume of papers on the issue of electron transport in quantum dots, I was excited by what I saw as an ideal opportunity to provide an overview of a field of research that has made significant contributions in recent years, both to our understanding of fundamental physics, and to the development of novel nanoelectronic technologies. The need for such a volume seemed to be made more pressing by the fact that few comprehensive reviews of this topic have appeared in the literature, in spite of the vast activity in this area over the course of the last decade or so. With this motivation, I set out to try to compile a volume that would fairly reflect the wide range of opinions that has emerged in the study of electron transport in quantum dots. Indeed, there has been no effort on my part to ensure any consistency between the different chapters, since I would prefer that this volume instead serve as a useful forum for the debate of critical issues in this still developing field. In this matter, I have been assisted greatly by the excellent series of articles provided by the different authors, who are widely recognized as some of the leaders in this vital area of research.

Half-Metallic Materials and Their Properties Mar 26 2020 This volume provides a detailed treatment of half-metallic materials and their properties from both an experimental and theoretical point of view. It discusses the methods used to understand and predict the properties of half-metals and the gamut of other materials amenable to these techniques. It also offers an expansive bibliography to facilitate further and deeper research. This book provides the precise definitions of all key terminology used in the vast and varied literature. This is the first comprehensive monograph on the subject and will serve as a starting point for graduate students and senior researchers who wish to enter the field. This book will also be an invaluable reference to those already working in the area of half-metallic materials. Contents:IntroductionMethods of Studying Half-MetalsHeusler AlloysHalf-Metallic OxidesHalf-Metals with Simple Structures Readership: Graduate students and researchers working in the field of half-metallic materials. Keywords:Half-Metals;Spintronics;Magneto-Electronics;Magnetism;Superlattices;HeterostructuresKey Features:This book comprehensively covers the area of half-metallic materials, and discusses both experimental and theoretical methods used to understand and predict the properties of these materialsThis book provides a comprehensive bibliography to facilitate further researchIt is written to serve a varied audience, from students to practising researchers in the field

Extended Defects in Semiconductors Jan 24 2020 The elucidation of the effects of structurally extended defects on electronic properties of materials is especially important in view of the current advances in electronic device development that involve defect control and engineering at the nanometer level. This book surveys the properties, effects, roles and characterization of extended defects in semiconductors. The basic properties of extended defects (dislocations, stacking faults, grain boundaries, and precipitates) are outlined, and their effect on the electronic properties of semiconductors, their role in semiconductor devices, and techniques for their characterization are discussed. These topics are among the central issues in the investigation and applications of semiconductors and in the operation of semiconductor devices. The authors preface their treatment with an introduction to semiconductor materials and conclude with a chapter on point defect maldistributions. This text is suitable for advanced undergraduate and graduate students in materials science and engineering, and for those studying semiconductor physics.

The Chemistry of Molecular Imaging Dec 15 2021 Molecular imaging is primarily about the chemistry of novel biological probes, yet the vast majority of practitioners are not chemists or biochemists. This is the first book, written from a chemist's point of view, to address the nature of the chemical interaction between probe and environment to help elucidate biochemical detail instead of bulk anatomy. Covers all of the fundamentals of modern imaging methodologies, including their techniques and application within medicine and industry Focuses primarily on the chemistry of probes and imaging agents, and chemical methodology for labelling and bioconjugation First book to investigate the chemistry of molecular imaging Aimed at students as well as researchers involved in the area of molecular imaging

Atlas of Trichoscopy Nov 21 2019 The aim of this atlas is to provide detailed and comprehensive, easy-to-use information, sufficient to perform trichoscopy in clinical practice. From basics to advanced knowledge, everything in one book. In this sense it is rather an “illustrated textbook” than solely an atlas. It includes evidence based information, acknowledged algorithms, which help easy diagnosis and “take home messages”, which aid memorizing specific features of diverse diseases. The atlas consists of two major parts. In the first part the authors describe structures and patterns seen in trichoscopy. The second part consists of detailed description of characteristic trichoscopy features of diverse diseases of hair and scalp. Consecutive chapters illustrate genetic hair disorders, acquired hair loss and scalp diseases.

Science with Astronomical Near-Infrared Sky Surveys Oct 21 2019 Outstanding progress in near-infrared detection technology and in real-time image processing has led astronomers to start undertaking all-sky surveys in the 1--2 mum range (project DENIS in Europe and 2MASS in the U.S.A.), surveys which will have a considerable impact in various areas of astronomy. This book gathers the contributions of more than 80 specialists involved in fields of interest as different as low mass stars, late stages of stellar evolution, star formation, stellar populations of the Galaxy and the Magellanic Clouds, the local structure of the Universe, and observational cosmology. It describes the impact on these fields of the exhaustive data bases and catalogs of stars and galaxies that these surveys will provide. The considerable interest of these documents for the future of infrared space and ground-based projects and the complementarity with other currently ongoing or planned surveys in other spectral ranges are emphasized.

Printing on Polymers Aug 19 2019 **Printing on Polymers: Fundamentals and Applications** is the first authoritative reference covering the most important developments in the field of printing on polymers, their composites, nanocomposites, and gels. The book examines the current state-of-the-art and new challenges in the formulation of inks, surface activation of polymer surfaces, and various methods of printing. The book equips engineers and materials scientists with the tools required to select the correct method, assess the quality of the result, reduce costs, and keep up-to-date with regulations and environmental concerns. Choosing the correct way of decorating a particular polymer is an important part of the production process. Although printing on polymeric substrates can have desired positive effects, there can be problems associated with various decorating techniques. Physical, chemical, and thermal interactions can cause problems, such as cracking, peeling, or dulling. Safety, environmental sustainability, and cost are also significant factors which need to be considered. With contributions from leading researchers from industry, academia, and private research institutions, this book serves as a one-stop reference for this field—from print ink manufacture to polymer surface modification and characterization; and from printing methods to applications and end-of-life issues. Enables engineers to select the correct decoration method for each material and application, assess print quality, and reduce costs Increases familiarity with the terminology, tests, processes, techniques, and regulations of printing on plastic, which reduces the risk of adverse reactions, such as cracking, peeling, or dulling of the print Addresses the issues of environmental impact and cost when printing on polymeric substrates Features contributions from leading researchers from industry, academia, and private research institutions

Tomato Diseases May 20 2022 Following the successful first edition, this revised and greatly expanded edition *Tomato Diseases: Identification, Biology and Control* is the definitive work on the diseases and disorders of the tomato. The tomato is the world’s most widely produced vegetable. The number of diseases affecting the tomato is enormous: hundreds of bio-aggressors, more than 50 non-parasitic diseases, plus new and alarmingly frequent emerging diseases. Despite considerable progress to curb these diseases, they remain a constant threat to crops, often causing considerable damage. In such a context, the identification, detection, knowledge and control of these diseases—symptoms often can be very similar—are challenges that this book will help overcome. Containing more than 900 color photos, the book consists of two main parts. The first is designed as a diagnostic tool, allowing the reader to alternate between the observation of the diseased plant, environmental questions, and the prioritization of differential diagnoses. The second part comprises numerous information sheets detailing the characteristics of most tomato pathogens, geographic distribution, impact on production, types of symptoms, and life history of the plant. This section also describes the range of plant protection and disease resistance measures currently available. This unique volume is a comprehensive overview of the latest scientific knowledge on parasitic and non-parasitic tomato diseases worldwide. It will address the needs of tomato producers and keen gardeners, as well as those of researchers, teachers and their students.

Materials Science and Engineering of Carbon Jun 09 2021 **Materials Science and Engineering of Carbon: Characterization** discusses 12 characterization techniques, focusing on their application to carbon materials, including X-ray diffraction, X-ray small-angle scattering, transmission electron microscopy, Raman spectroscopy, scanning electron microscopy, image analysis, X-ray photoelectron spectroscopy, magnetoresistance, electrochemical performance, pore structure analysis, thermal analyses, and quantification of functional groups. Each contributor in the book has worked on carbon materials for many years, and their background and experience will provide guidance on the development and research of carbon materials and their further applications. Focuses on characterization techniques for carbon materials Authored by experts who are considered specialists in their respective techniques Presents practical results on various carbon materials, including fault results, which will help readers understand the optimum conditions for the characterization of carbon materials

Radiologic-Pathologic Correlations from Head to Toe Feb 05 2021 This richly illustrated book offers correlation of gross and microscopic pathology with abnormal radiologic images. Taking advantage of all imaging modalities, the authors give detailed descriptions and critical assessments of radiologic presentations of a broad spectrum of diseases from most organ systems, including the nervous system, head and neck, chest, abdomen, urogenital system, musculoskeletal system and breast. Some chapters are based on a very successful lecture series offered recently at the European Congress of Radiology in Vienna, with additional important topics added. The book helps the clinician to apply the principles of radiologic--pathologic correlation to the interpretation of radiologic studies, to understand the clinical and pathologic implications of the radiologic appearance and to refine the differential diagnosis in various entities and organ systems, based on specific cross-correlated features. Authoritative reviews, written by leading experts, are provided on all of the important clinical entities.

African Animals Dot-to-Dot Sep 19 2019 Connect the dots and take a walk on the wild side with these fascinating African creatures, ranging from Aardvark to Zebra--beasts both familiar and unusual. Discover a mama baboon carrying her baby on her belly and her back, swift cheetahs running 70 miles per hour, and high-flying martial eagles soaring over the savanna. Each illustration comes with information on the type of animal, its Swahili and scientific names, and lots more fun facts.

The Halo Effect May 28 2020 Much of our business thinking is shaped by delusions -- errors of logic and flawed judgments that distort our understanding of the real reasons for a company's performance. In a brilliant and unconventional book, Phil Rosenzweig unmasks the delusions that are commonly found in the corporate world. These delusions affect the business press and academic research, as well as many bestselling books that promise to reveal the secrets of success or the path to greatness. Such books claim to be based on rigorous thinking, but operate mainly at the level of storytelling. They provide comfort and inspiration, but deceive managers about the true nature of business success. The most pervasive delusion is the Halo Effect. When a company's sales and profits are up, people often conclude that it has a brilliant strategy, a visionary leader, capable employees, and a superb corporate culture. When performance falters, they conclude that the strategy was wrong, the leader became arrogant, the people were complacent, and the culture was stagnant. In fact, little may have changed -- company performance creates a Halo that shapes the way we perceive strategy, leadership, people, culture, and more. Drawing on examples from leading companies including Cisco Systems, IBM, Nokia, and ABB, Rosenzweig shows how the Halo Effect is widespread, undermining the usefulness of business bestsellers from *In Search of Excellence* to *Built to Last* and *Good to Great*. Rosenzweig identifies nine popular business delusions. Among them: **The Delusion of Absolute Performance:** Company performance is relative to competition, not absolute, which is why following a formula can never guarantee results. Success comes from doing things better than rivals, which means that managers have to take risks. **The Delusion of Rigorous Research:** Many bestselling authors praise themselves for the vast amount of data they have gathered, but forget that if the data aren't valid, it doesn't matter how much was gathered or how sophisticated the research methods appear to be. They trick the reader by substituting sizzle for substance. **The Delusion of Single Explanations:** Many studies show that a particular factor, such as corporate culture or social responsibility or customer focus, leads to improved performance. But since many of these factors are highly correlated, the effect of each one is usually less than suggested. In what promises to be a landmark book, *The Halo Effect* replaces mistaken thinking with a sharper understanding of what drives business success and failure. *The Halo Effect* is a guide for the thinking manager, a way to detect errors in business research and to reach a clearer understanding of what drives business success and failure. Skeptical, brilliant, iconoclastic, and mercifully free of business jargon, Rosenzweig's book is nevertheless dead serious, making his arguments about important issues in an unsparing and direct way that will appeal to a broad business audience. For managers who want to separate fact from fiction in the world of business, *The Halo Effect* is essential reading -- witty, often funny, and sharply argued, it's an antidote to so much of the conventional thinking that clutters business bookshelves.

Advances in Hypopigmentation Research and Treatment: 2012 Edition Sep 12 2021 **Advances in Hypopigmentation Research and Treatment / 2012 Edition** is a ScholarlyPaper™ that delivers timely, authoritative, and intensively focused information about Hypopigmentation in a compact format. The editors have built *Advances in Hypopigmentation Research and Treatment / 2012 Edition* on the vast information databases of ScholarlyNews.™ You can expect the information about Hypopigmentation in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of *Advances in Hypopigmentation Research and Treatment / 2012 Edition* has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. Encyclopedia of Parallel Computing Aug 11 2021 Containing over 300 entries in an A-Z format, the *Encyclopedia of Parallel Computing* provides easy, intuitive access to relevant information for professionals and researchers seeking access to any aspect within the broad field of parallel computing. Topics for

this comprehensive reference were selected, written, and peer-reviewed by an international pool of distinguished researchers in the field. The Encyclopedia is broad in scope, covering machine organization, programming languages, algorithms, and applications. Within each area, concepts, designs, and specific implementations are presented. The highly-structured essays in this work comprise synonyms, a definition and discussion of the topic, bibliographies, and links to related literature. Extensive cross-references to other entries within the Encyclopedia support efficient, user-friendly searches for immediate access to useful information. Key concepts presented in the Encyclopedia of Parallel Computing include; laws and metrics; specific numerical and non-numerical algorithms; asynchronous algorithms; libraries of subroutines; benchmark suites; applications; sequential consistency and cache coherency; machine classes such as clusters, shared-memory multiprocessors, special-purpose machines and dataflow machines; specific machines such as Cray supercomputers, IBM's cell processor and Intel's multicore machines; race detection and auto parallelization; parallel programming languages, synchronization primitives, collective operations, message passing libraries, checkpointing, and operating systems. Topics covered: Speedup, Efficiency, Isoefficiency, Redundancy, Amdahls law, Computer Architecture Concepts, Parallel Machine Designs, Benchmarks, Parallel Programming concepts & design, Algorithms, Parallel applications. This authoritative reference will be published in two formats: print and online. The online edition features hyperlinks to cross-references and to additional significant research. Related Subjects: supercomputing, high-performance computing, distributed computing

Active Galactic Nuclei Jul 18 2019 All galaxies host a super-massive black hole in their center. These black holes grow their mass in symbiosis with their host galaxy and moderate their star formation. When matter is driven towards the nucleus, an accretion disk is formed to transfer angular momentum and considerable energy is released when the material falls into the black hole: this is the phenomenon of active galactic nuclei (AGN). A nucleus can shine one thousand times more brightly than the entire galaxy with its 200 billion stars. The nuclear activity can take many forms, from very powerful quasars to more ordinary Seyfert galaxies, passing by radio-galaxies, which eject a collimated plasma at ten times the radius of the galaxy. This book examines all of these manifestations and presents a unified view. When two galaxies merge, a binary black hole is formed and the two black holes will spiral inwards and merge, emitting long gravitational waves, which could be detected by the future LISA satellite.

Quantum Dots Mar 06 2021 This book deals with the electronic and optical properties of two low-dimensional systems: quantum dots and quantum antidots and is divided into two parts. Part one is a self-contained monograph which describes in detail the theoretical and experimental background for exploration of electronic states of the quantum-confined systems. Starting from the single-electron picture of the system, the book describes various experimental methods that provide important information on these systems. Concentrating on many-electron systems, theoretical developments are described in detail and their experimental consequences are also discussed. The field has witnessed an almost explosive growth and some of the future directions of explorations are highlighted towards the end of the monograph. The subject matter is dealt with in such a way that it is both accessible to beginners and useful for expert researchers as a comprehensive review of most of the developments in the field. Furthermore the book contains 37 reprinted articles which have been selected to provide a first-hand picture of the overall developments in the field. The early papers have been arranged to portray the developments chronologically, and the more recent papers provide an overview of future direction in the research.

Lateral Alignment of Epitaxial Quantum Dots Jun 16 2019 This book describes the full range of possible strategies for laterally aligning self-assembled quantum dots on a substrate surface, beginning with pure self-ordering mechanisms and culminating with forced alignment by lithographic positioning. The text addresses both short- and long-range ordering phenomena and introduces future high integration of single quantum dot devices on a single chip. Contributions by well-known experts ensure that all relevant quantum-dot heterostructures are elucidated from diverse perspectives.
