Base-1 method: A structural-functional approach to
word, sentence and discourse readability Mar 22 2022
Text readability is at the core of successful reading
instruction and language learning. To counteract the
challenges of complex reading content, text leveling is a
vital necessity for readers with limited language access. A
transdisciplinary analysis of reading development and
linguistic interrelations builds the theoretical foundation

of the base-1 method. This method focuses solely on structural and functional text elements on the word, sentence and cohesion level. But this book also discusses the significance of other prevalent readability factors, such as the reader's language knowledge or socio-cultural background. The base-1 method is designed to level early reading texts in German and other alphabetic languages. Experimental tests with a German immersion population has led to a preliminary calibration to demonstrate the validity of this approach. Bernd Nuss ist erfahrener Immersionslehrer in verschiedenen Programmen, die sich über Nord-, Zentral- und Südamerika erstrecken. An der E. E. Waddell Language Academy wirkt er schulintern als Immersion Facilitator, kooperiert mit Bildungsorganisationen und betreut die Praktika von Gaststudierenden an der Schule. Bernd Nuss has worked as an educator and facilitator in English and German language immersion programs all over the Americas and in Europe. In this capacity, he has also been collaborating as a researcher with universities and other educational institutions in Europe, Asia, and the USA.

The Construction of Words Oct 29 2022 This volume focuses on detailed studies of various aspects of Construction Morphology, and combines theoretical analysis and descriptive detail. It deals with data from several domains of linguistics and contributes to an integration of findings from various subdisciplines of linguistics into a common model of the architecture of

language. It presents applications and extensions of the model of Construction Morphology to a wide range of languages. Construction Morphology is one of the theoretical paradigms in present-day morphology. It makes use of concepts of Construction Grammar for the analysis of word formation and inflection. Complex words are seen as constructions, that is, pairs of form and meaning. Morphological patterns are accounted for by construction schemas. These are the recipes for coining new words and word forms, and they motivate the properties of existing complex words. Both schemas and individual words are stored, and hence there is no strict separation of lexicon and grammar. In addition to abstract schemas there are subschemas for subclasses of complex words with specific properties. This architecture of the grammar is in harmony with findings from other empirical domains of linguistics such as language acquisition, word processing, and language change.

Frame-Constructional Verb Classes Oct 05 2020 While verb classes are a mainstay of linguistic research, the field lacks consensus on precisely what constitutes a verb class. This book presents a novel approach to verb classes, employing a bottom-up, corpus-based methodology and combining key insights from Frame Semantics, Construction Grammar, and Valency Grammar. On this approach, verb classes are formulated at varying granularity levels to adequately capture both the shared semantic and syntactic properties unifying verbs of a class and the idiosyncratic properties unique to individual verbs. In-depth analyses based on this approach shed light on the interrelations between verbs, frame-semantics, and constructions, and on the semantic richness and network organization of grammatical constructions. This approach is extended to a comparison of Change and Theft verbs, revealing unexpected lexical and syntactic differences across semantically distinct classes. Finally, a range of contrastive (German–English) analyses demonstrate how verb classes can inform the cross-linguistic comparison of verbs and constructions.

Building a Better Vocabulary Jan 28 2020 After finishing work on the fundamentals of English grammar and syntax, the Hispanic student is often looking for ways to increase his or her general vocabulary. To that end, this book is designed either for studying by oneself or for participating in an academic program. To adapt the text to the widest levels of language skills, the words chosen for study range from the relatively simple to the more complex. Then, as a first step in outlining the meaning of the word, its Spanish equivalent appears in italics immediately after its initial listing and its sounds-of-speech pronunciation. The full analysis of the word ends with a space for the student's using that word in a sentence. That analysis, including a listing of typical synonyms and antonyms, is followed by an end-of-section series of comprehension checks. In short, the student sees the impact of context on the meaning of a word, has a familiar Spanish word as an added help to understanding the word, learns something of its origin, has an immediate opportunity to use it, and gets acquainted with its common synonyms and antonyms. Finally, each of the twelve 'chapters' contains a short discussion of a common

mistake to be avoided or a desirable quality of language (e.g., reliance on 'action words') to be developed.

Word-Building Strategies in Modern English:

Contamination Decrypted Apr 23 2022 Scientific Essay from the year 2010 in the subject English Language and Literature Studies - Linguistics, Moscow State Pedagogical University (Moscow State Pedagogical University), course: lexicology and stylistics, language: English, abstract: The course investigates some structural, semantic, stylistic and pragmatic specifics of contamination in modern English by comparing it with other word-building patterns - composition, derivation, combining forms and their multiple varieties.

Contamination is currently made use of in different types of discourse - advertisements, periodicals, terminology. The aim of the selective course is multiple: first, to prove that contamination is losing its marginal status and is moving centripetally towards the centre; second, to compare contamination with other, contiguous and not,

word-forming models; third, to propose a number of exercises that would increase students' awareness of such words. The ultimate aim is to dispel the skeptical attitude towards such words by dint of showing that not all of them are facetious, superfluous or fancy. The course also aims to discuss the application of contamination in advertising and information technology. The intention of the author is to raise students' awareness of the genesis of an utterance. The book is meant for foreign language students, post-graduate students, who mean to link their research to word-formation, teachers of English, as well as for a broader audience of philologists and linguists.

Frames of Understanding in Text and Discourse Dec 27 2019

How do words mean? What is the nature of meaning? How can we grasp a word's meaning? The frame-semantic approach developed in this book offers some well-founded answers to such long-standing, but still controversial issues. Following Charles Fillmore's definition of frames as both organizers of experience and tools for understanding, the monograph attempts to examine one of the most important concepts of Cognitive Linguistics in more detail. The point of departure is Fillmore's conception of "frames of understanding" – an approach to (cognitive) semantics that Fillmore developed

from 1975 to 1985. The envisaged Understanding Semantics (“U-Semantics”) is a semantic theory sui generis whose significance for linguistic research cannot be overestimated. In addition to its crucial role in the development of the theoretical foundations of U-semantics, corpus-based frame semantics can be applied fruitfully in the investigation of knowledge-building processes in text and discourse.

Radical Construction Grammar Oct 17 2021 This book is based on the results of research in language typology, and motivated by the need for a theory to explain them. The essence of the approach is (a) that almost all aspects of grammatical structure are language specific, and (b) that language universals are to be found in conceptual structure and in the mapping of conceptual structure on to linguistic form. It proposes intimate links between syntactic and semantic structures, and argues that the basic elements of any language are not syntactic but syntactic-semantic 'Gestalts'. Professor Croft puts forward a new approach to syntactic representation and a new model of how language and languages work. He covers a wide range of syntactic phenomena, illustrating these with examples that show the varied grammatical structures of the world's languages. The book will be accessible all linguists at graduate level and beyond.

From Word-Formation Rules to Creating Paradigms

Oct 25 2019 Seminar paper from the year 2007 in the subject English Language and Literature Studies - Linguistics, Technical University of Braunschweig (Englisches Seminar), course: Language Acquisition: Vocabulary and Modality, language: English, abstract: In the language acquisition process, children acquire words by simultaneously trying to comprehend how language functions and expressing forms which they have learned for meanings they wish to convey. Children are very skillful at identifying words in the stream of sounds, attributing meaning to them, segmenting them into smaller parts, and detecting rules of word structure. When they create words themselves, they use everything they have learned at different stages of acquisition, by following the rules they have discovered in language. As children learn more words, they are able to identify patterns and certain regularities in the lexicon. They make use of these patterns and build paradigms, i.e. they use the same templates to connect words which are related in

form and meaning. By creating forms for specific meanings, they coin words which fit into an already existing paradigm. Paradigms reflect a certain regularity within language, and at the same time, reveal children's need to organize and compress the huge amount of words that they encounter. Despite children's skillfulness in learning language and their ability to analyze the structure of language and its regularities, despite their mastery in creating innovative complex words that follow principles of word-formation, not all the words children produce are legitimate forms. The purpose of this paper is to identify the reasons why errors occur in children's production of complex words. The second part of the paper will deal with a theoretical analysis of complex words, from the internal structure of words to main types of word-formation like derivation and compounding, and finally, will focus on establishing rules of word-building that children identify in language and also use in their word production. The following section will treat children's use of complex words, the word-formation processes they favor, the types of words they find easier to create, as well as the principles that they follow in their word creation. This part will close with a thematization of paradigms. The fourth part will analyze errors, and will concentrate on elucidating the purpose of this paper, namely, the question referring to the source of error production in children's creation of complex words. As will be revealed later in the paper, many of the illegitimate forms that

children create are a result of non-permissible generalizations which reflect the regulating role of paradigms.
