**The History and Philosophy  
of Astrobiology** Jun 29 2022  
Human beings have wondered  
about the stars since the dawn  
of the species. Does life exist  
out there - intelligent life, even  
- or are we alone? The quest  
for life in the universe touches  
on fundamental hopes and  
fears. It touches on the essence  
of what it means to formulate a  
theory, grasp a concept, and  
have an imagination. This book  
traces the history of the  
science of this area and the  
development of new schools in  
philosophy. Its essays seek to  
establish the history and  
philosophy of astrobiology as

research fields in their own  
right by addressing cognitive,  
linguistic, epistemological,  
ethical, cultural, societal, and  
historical perspectives on  
astrobiology. The book is  
divided into three sections. The  
first (Cognition) focuses on the  
human mind and what it  
contributes to the search for  
life. It explores the emergence  
and evolution of terrestrial life  
and cognition and the  
challenges humans face as they  
reach to the stars. The essays  
raise philosophical questions,  
pose ethical dilemmas, and  
offer a variety of approaches,  
including one from cognitive  
zoology, in formulating a  
theory of the universal  
principles of intelligence, the  
limits of human conceptual  
abilities, and the human mind's  
encounter with the unknown.  
The second section  
(Communication) examines the  
linguistic and semiotic  
requirements for interstellar  
communication. What is  
needed for successful  
communication? Are there  
universal rules for success?

What are the possible

- and limitations - of exolanguages? What is required for recognizing a message as a message? The third section (Culture) considers cultural and societal issues. It explores astrobiology's organization as a scientific discipline, its responsibilities to the public sphere, and its theological implications. It reviews the historically important panspermia hypothesis, along with the popularization of astrobiology and its ongoing institutionalisation. Through addressing these questions, we take our first steps in exploring the immense terra incognita of extraterrestrial life and the human mind.

these narratives shaped developments in science and culture? What can solar power's history tell us about its future, within a world adapting to climate crisis? Identifying the history of capturing solar radiance as a focal point between science and the imagination, *Imagining Solar Energy* argues that the literary, artistic and mythical resonances of solar power - from the Renaissance to the present day - have not only been inspired by, but have also cultivated and sustained its scientific and technological development. Ranging from Archimedes to Isaac Asimov, John Dee to Humphry Davy, Aphra Behn to J. G. Ballard, the book argues that solar energy translates into many different kinds of power (physical, political, intellectual and cultural), and establishes for the first time the importance of solar energy to many literary and scientific endeavours.

Mirrors and Mirroring from Antiquity to the Early Modern Period Apr 27 2022 This volume examines mirrors and mirroring through a series of multidisciplinary essays, especially focusing on the intersection between technological and cultural dynamics of mirrors. The international scholars brought together here explore critical questions around the mirror as artefact and the phenomenon of mirroring. Beside the common visual registration of an action or inaction, in a two dimensional and reversed form, various types of mirrors often possess special abilities which can produce a distorted picture of reality, serving in this way illusion and falsehood. Part I looks at a selection of the body

from ancient writers, demonstrating the concern to explore these same questions in antiquity. Part II considers the role reflections can play in forming ideas of gender and identity. Beyond the everyday, we see in Part III how oracular mirrors and magical mirrors reveal the invisible divine - prosthetics that allow us to look where the eye cannot reach. Finally, Part IV considers mirrors' roles in displaying the visible and invisible in antiquity and since.
